Romik Chatterjee has a Ph.D. from the University of Texas in Electrical Engineering. He has been involved in the development of new scientific imaging methods and technologies for over two decades. His research started with the visualization of density fluctuations that occur in magnetically confined fusion plasmas with an infrared laser based imaging system. He has experience developing imaging systems using microwaves, visible and infrared light, and x-rays. As the Vice President of Business Development at Graftek Imaging for the last 6 years, he has developed and deployed custom machine vision systems for Fortune 50 companies. Graftek has specialized in color measurements, metrology and automated inspection systems for semiconductor, electronic manufacturing and food industries.
